Curriculum Shop Talk

Grace Bird of the University of California Office of Relations with Schools met here last week with Cerritos JC administrators to discuss how best to integrate our curriculum with that of the university.

Equivalent programs for lower division work were approved in full by Miss Bird and local administrators. Full credit is given by the university for all CJC courses leading to advanced degrees.

The conference was a routine follow-up to many such talks held during the past year to insure complete understanding of curriculum needs of both Cerritos JC and of state-approved four-year colleges and universities.

Dr. Robert Rockwell, director (rear view); Genevieve Humiston, registrar; Miss Bird; Dr. Robert Baker, asst. director, and Ralph Burnight, president.

Conversation Pieces

CJC student body officers will attend the California Junior College Student Government Association conference to be held at the Ambassador Hotel in Los Angeles May 2 to 4. Some 60 odd junior colleges will send their student body representative to that meeting. Another student government conference is scheduled at Orange Coast College for April 6th. Student body president James Crabb will attend.

Suggestions for names and school colors are still coming in. A series of meetings is being held by the student body officers to consider the final selection. At its meeting last Friday the officers also discussed plans for spring semester social activities. A dance is scheduled for some time in March or early April.

Athletic director Earl Klapstein announces completion of the football schedule for '57. Two dates are still open for the '58 schedule, four dates are available for the '59 football schedule. A full conference slate of 12 basketball games for '58 is in the final stage of completion.

Pogo Propulsion

If you thought you saw a man last week hopping around as though propelled by an invisible pogo stick, you can trust your eyes, all right. You saw him.

He is Santi D'Amico, of 15602 Cameo Ave., Norwalk. He works at the Autometrics Division of North American Aviation as a design engineer. Our airborne student is taking trig, algebra and English, and is aiming towards a degree in engineering.

Now D'Amico assures us he is not giving out classified information when he reveals the nature of the propellant. It's a simple one, really, one known to science for thousands of years. On February 18 last the D'Amicos became the parents of an 8 lb., 6 oz. girl, named Anina Janine. Happy landings, Pop!
