Jobs Found for Students at Christmas

With less than two weeks remaining before the crowds do their last minute Christmas shopping anyone with the intention of getting a job for the holidays had better forget it.

Cerritos students now holding those treasured positions of employment were smart enough to go see Madge Coto at the Job Placement Office (or went and tackled the problem solo) last October. It is during that month and the beginning of November that preparations are made for interviews and any training that might be necessary.

The Christmas season officially begins on Friday following Thanksgiving. On that day, the so-called Christmas jobs begin and last until one or two days before Dec. 25. All together, that only amounts to about one month's work, but still that's one month's pay, usually amounting to \$200 or more.

The jobs that some people were lucky enough to get were the usual sales jobs in the big department stores, jobs in markets and small stores. Not as many Santa Clauses were hired from Cerritos College as have been in the past.

This was because the firm of Santa Claus, Inc. of Compton has been taken over by another firm which tends to hire older men. The company said that college age men are not as dependable as they'd like them to be.

Another source of employment during the Christmas season was the post office, but they have recently incorporated stricter rules, which prohibits many students from working there.

Madge Coto said, however, that even with heavy inflation and the energy crisis, job placement during the month of December has been extremely successful, and this is one of the most prosperous holiday seasons in the last 17 years.

IN THE TREES - Circle K members (l to r) Cole Mobley, Ralph Ausmus and Tony Fiorino prepare for the Christmas season. A Christmas Tree sale by Circle K started Dec. 9 in the Cerritos College parking lot. Teachers, students and employees are given discounts.

Energy Cutbacks Requested Here

In an effort to comply with President Nixon's recent plea to citizens to conserve energy, Cerritos College is taking a number of steps to meet that request.

In a memo distributed to employees here, Dr. Walter Magnuson, assistant superintendent of business services, has asked that those individuals who have access to rooms conserve energy by turning off lights when rooms are not in use and lowering thermostats on a voluntary basis.

At the same time, at least one mandatory step has already been taken — the turning off of lights in the parking lots two hours earlier than usual.

Presently lights in the parking lots are turned off at 1 a.m. Starting last Friday, though, they were turned off at 11 p.m., as students taking night classes should have left the premises by then, according to Magnuson.

Another Step

In another mandatory step, Magnuson has asked Vern Roberts, supervisor of maintenance operations, to turn off heating and air conditioning during weekends and extended holidays.

Magnuson has also requested that faculty and administrative members set thermostats in classrooms "no higher than 68 degrees," and at 76 degrees in the summer. The reasoning behind such actions, Magnuson said, is that it requires less fuel to raise temperatures of buildings to the standard 72 degrees than the recommended figure of 68 in the winter.

In the summer, it would require less electricity to lower temperatures to 76 degrees than to 72.

Magnuson also recommends that "lights are to be turned off when leaving the room for a period of longer than an hour."

The assistant superintendent said that night-time instructors occasionally forget to turn out lights after classes are over and that lights remain burning for hours.

In another voluntary recommendation, "staff and students are encouraged to utilize car pools for transportation."

Magnuson also urges persons driving district vehicles to observe a 50-miles-per-hour speed limit. He also said that the gasoline shortage may also cause the purchasing department to look in the future for district vehicles "which will get better gas mileage than the ones we've got now."

"Minimize" Summer Facilities? Magnuson also said that the number of

facilities used during summer school may be "minimized" in an effort to use less energy for lighting and air conditioning.

In his memo, Magnuson also stated that the administration is receptive to any other suggestions from teachers, administrators and students that might be implemented.

Magnuson said that most of his recommendations are strictly voluntary, and that there is no way to enforce them.

"At this point," Magnuson said, "we're just hoping that people will follow our suggestions. If it turns out that our suggestions aren't working, then we'll want comments on that too."

Circle K Club Sells Trees

Christmas trees for the third year are now on sale in the parking lot in front of the football stadium.

Circle K is again selling Christmas trees for different service projects handled by Circle K. Last year the club brought in \$1,200 from the sale of 500 trees. Circle K is offering you the student of Cerritos a discount on trees by selling you a pre-sale ticket for \$1. The discount on the trees is \$2. There will be 14 different varieties of trees ranging from Douglas Firs to Scotch Pines. The sizes of the trees range from 2 ft. to 12 ft.

"Eleven of the 14 different varieties of trees are priced under \$11. Flocking is offered too said Nick Maull Circle K president.

Last year the club gave \$500 to the Multiple Sclerosis fund raising drive, and set up a scholarship fund for needy Cerritos students, going full time.

The trees are shipped in from Washington state. This year the club has ordered 600 trees and plans to sell them up until Christmas Eve. If they have not sold out by then the remaining trees will be given to needy families in our area for Christmas.

The tree lot will be manned daily by at least three persons and a night watch will be set up. You can get your pre-sale ticket from any Circle K member or from the Student Affairs office.

Proposal Made Four Years Ago For First Technology Building Plan

"I'll believe it when the foundation is poured," said John Johnson, auto technology instructor, reacting to the auto technology building plan included in Cerritos' ten-year building project.

Four years ago definite plans were made to include a new auto technology building, but the Vocational Arts Department is still waiting for approval from the State Board of Education.

Getting approval from the board requires a room utilization evaluation of Cerritos College. The use of a new modified plan for evaluating the rooms will help the Cerritos cause because under the old plan, programs after 3 p.m. were not included in the evaluation and Cerritos has more night students than day students.

Inadequate Facilities

"When the campus was constructed, no facilities were available for auto technology, so the present site was converted into auto body, auto painting and auto welding," said Jerry Shopfner, auto technology instructor. The facilities are obviously inadequate for proper instruction at the college level, especially when the only facilities consist of an old parking lot, a spray booth and a tool room. They have to use the welding shops' facilities for auto welding, including the same rest rooms and offices.

"We have to train more specialized skills to people to keep up with the more sophisticated types of cars," said Shopfner.

"We're even learning a new computerized, electronic braking system," said Mike Horan, a student in the program.

Busy Schedule

The classes run almost straight through from 7:00 a.m. until 10:30 p.m. with the free hours used for maintenance such as servicing the compressors and moving equipment around. A few of the classes even overlap in the department's attempt to meet the demands of the students. Classes are already taught on Saturdays and Sundays and 12:00 midnight classes were even being considered.

"We teach over 2,000 student hours per week in a parking lot. We definitely need the building," said Shopfner.

The need for more highly trained mechanics is the main reason for wanting the auto technology building and, according to Peter Carberry of the Independent Garage Owners of California, one-fifth of all the highway fatalities in California are traceable to mechanical defects.

First the Building

"We can't show an increase in the auto technology department because we can't pack any more students into the program. We must convince the State Board of Education that if we get the building, we could better develop our program," said Allen Frankley, coordinator of the vocational department.

With the total enrollment figures at Cerritos seeming to level off with no sizeable increase in students, the need for a new Auto Technology Building is suspect, but not according to Frankley.

"The total enrollment of the school has actually dropped a couple of hundred from last spring Semester, but I know that the figures do not show the increases in the Auto Technology Department," Frankley said.

Lots of planning is in store for the building, if approved by The State Department of Education. The newest facility in the area is at Cypress College, which has been thoroughly inspected for any mistakes made in the planning.

"We don't want the building obsolete the day we open the doors," Frankley said.

Tourism Class Need Surveyed

Classes in tourism may be offered at Cerritos in the future, depending upon the results of a survey to be made to determine whether there is a need for that course, according to Jack Randall, vice-president of the office of instruction.

Tourism, currently California's second most lucrative business, is to be taught in classes at many other junior colleges. The question, according to Randall, is whether there is enough of a need in this area for tourism to be taught at Cerritos.

Class Credit Exam Standards Relaxed

Requirements for students applying for credit by examination have been relaxed to give more students the opportunity to qualify.

The new policy, approved by the board of trustees in their Nov. 20 meeting, gives the administration the authority to set regulations for credit by examination requirements.

The administration has determined that students should only be required to have a grade point average of 2.0 to qualify for the test.

To qualify in the past, a student had to have a 2.5 GPA and also have completed at least 12 units. Under the new system, the GPA has been lowered and the 12 unit requirement dropped.

Credit by examination is a method by which a student may receive credit for a class by taking an examination based on the subject matter taught in that class.

Dr. Jack Randall, vice-president of instruction, said that the new policy will benefit new students because they will not have to be enrolled in 12 units to

qualify for the examination.

At the same meeting, the board also approved the concept of pass/fail grading system, giving the administration the authority to make regulations for a pass/fail system.

Presently there are listings available in counseling that contain which classes have been accredited as pass/fail and also which classes students may take a test for credit by examination.

Leakey Raps On Early Man

Richard Leakey, noted anthropologist and palaeontologist, who found what some consider the oldest and most complete human skull, will lecture and present a slide series entitled "Exciting New Early Man Discoveries in East Africa." The lecture will be on Thursday Feb. 24, at 8 p.m.

Leakey has been traveling throughout parts of Africa digging for findings of early man. His mother, Mary Leakey, found a skull that is said to be not less than 1,500,000 years old. Leakey since has discovered a skull which dates back to at least 2,500,000 years old. Leakey's discovery is considered the oldest and most complete skull ever found.

Leakey is presently the director of the National Museums of Kenya. He has been chairman of wildlife clubs in Kenya, chairman of the Kenya Exploration Society, and he is on the East African Wildlife Society Council. He is also a member of the working committee on Human Environment in Kenya. Tickets are \$2 for adults and \$1 for Cerritos students and children.

Bookstore Completion Deadline Will be Met

Despite three deadline extensions for the completion of the new student center, members of the administration and the work crew report that the final completion date, Jan. 29, will barely be met.

Work on the student center was hampered earlier this year by unusually heavy rains that caused the deadline for completion of the building to be moved back twice.

It was moved up a third time from Jan. 20 to the 29th, a date that Dr. Walter Magnuson, assistant superintendent of business services and John Marshall, building inspector are sure will be met.

Most Pressing Concern

Magnuson believes that the most pressing concern at the moment is that the bookstore area of the student center be completed to insure that books from the current store can be moved into the new facility.

Magnuson said that it is important that the books be moved into the new student center so books will be ready for sale for the two-week period starting on the opening day of the spring semester, Feb. 4. This time is when book sales are highest, he said.

A special Jan. 1 deadline has also been announced for the completion of the bookstore section of the student center. Building inspector John Marshall reports that construction workers are "working a little faster" to finish the bookstore to meet the earlier deadline. "There are not a lot of things that we can do to speed things along in one

particular section," Marshall said. But he also adds that the situation looks "promising" and that books should be ready to be moved in by Jan. 1.

Marshall also said that there may be a delay in the delivery of materials that were ordered months ago, but notes the construction industry is also feeling the pinch of many shortages.

He said that there may be a delay in the installation in the entrance doorways to the dean's office because there is a shortage of the type of aluminum that is planned to be used for frames for the doors.

A Short Supply

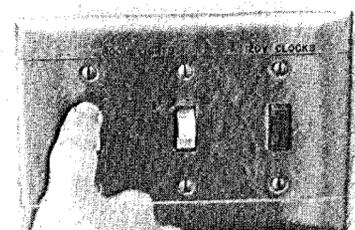

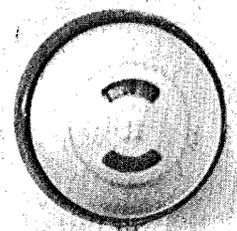

"Evidently," Marshall said, "the stuff is in short supply." He said that the frames were supposed to have been delivered on the Sept. 1, but so far haven't arrived.

Marshall said that "if worst comes to worst we can use a plywood frame" on a temporary basis in the entrance of the store, if the frames don't arrive.

Marshall said that because of the present trend of shortages in many areas, there may be shortages in materials delivered in the future. "You never know what's going to happen," he said.

Barring any other shortages that may cause delays, Marshall reports that both the bookstore and the entire student center will be completed by their respective completion dates.

"It will be awfully close," he said of the approaching deadline. "But we should be able to make it."

ENERGY CRISIS—With thermostats no higher than 68 degrees and the lights being turned off it is hoped that energy on campus can be conserved. Teachers and administrators are trying to help during the energy problem.

Advancement Opportunity

Some criticism has been voiced to a recent recommendation to add a two year degree requirement in horticulture on a job outline for an opening in the maintenance department.

The recommendation was made by John Zimmerman, director of maintenance operations and transportation department (MOT) because there was a need for a foreman with a two year degree in horticulture to carry out the duties of that job, according to Zimmerman.

The opening is for a grounds maintenance foreman, and for the past fifteen years, an associate in arts degree was not required for that position. Also neighboring colleges do not have a requirement for a similar position.

Should the requirement be added, many of the maintenance personnel who least ten or more years of experience, could not qualify in applying for the opening.

As with all jobs, education and experience are considered when filling an opening. There has been no requirement in the past. Why is one needed at this time? Aren't the men who have ten years of experience qualified for the job? Who determines before they apply if they're qualified or not?

As one gains experience, his chances for advancement improve and if the requirement was added, those who have gained the experience in hopes of attaining a promotion, will never be able to advance at Cerritos.

As a result of Zimmerman's recommendation, many of the maintenance personnel have been unhappy. Speculations have arisen concerning who Zimmerman may have in mind for that job, and rumors have begun concerning the hiring of Vern Roberts, supervisor of maintenance operations.

In attempting to correct these speculations, Zimmerman and Roberts have not commented and the speculations will probably continue unless some clarification is made either publicly or to the maintenance department.

It is hoped that the decision concerning the addition of a recommendation will be considered fairly thus allowing Cerritos maintenance person all the opportunity to apply for the opening.

Talon Marks recommends that no requirement be added so that those who have had hopes of advancement may have the opportunity to apply for a promotion.

Today's society is a competitive one and many have worked hard in hopes of reaching advancement. With this in mind as the job outlines are prepared and the screening process approaches, the person who is most qualified, whether it be experience, education, and/or leadership abilities, should be considered and not on the sole basis of a two year degree in horticulture which most men working for many years in the field will be able to have through experience.

A Persons 'Right to Know'

The issue of impeaching the President of the United States is still being pursued across the land as many persons are demanding their "right to know."

Constitutionally, the people would like to know just what President Nixon has done wrong (or right) and would like to know what action is going to be brought against him if found guilty of any fraudulent or corrupt monies and business dealings.

Full, costly and time consuming investigations are taking place at the tax payers request to bring this man to trial. While on the offset, it appears to be almost a personal thing with the American public, it is a constitutional necessity of the members of congress to bring these and other issues into full public view.

The disclosure of a personal life and how a person rises to power and wealth is usually brought together in a biography, that is, unless the person involved is thought to be a crook.

Mr. Nixon paid only a small tax debit on earnings that would allow a lower-income family to retire. His tax payment was small on these earnings because he received a quarter-million dollar tax break for releasing a personnel file on himself while serving as Vice-president of the US. Is this a constitutional benefit?

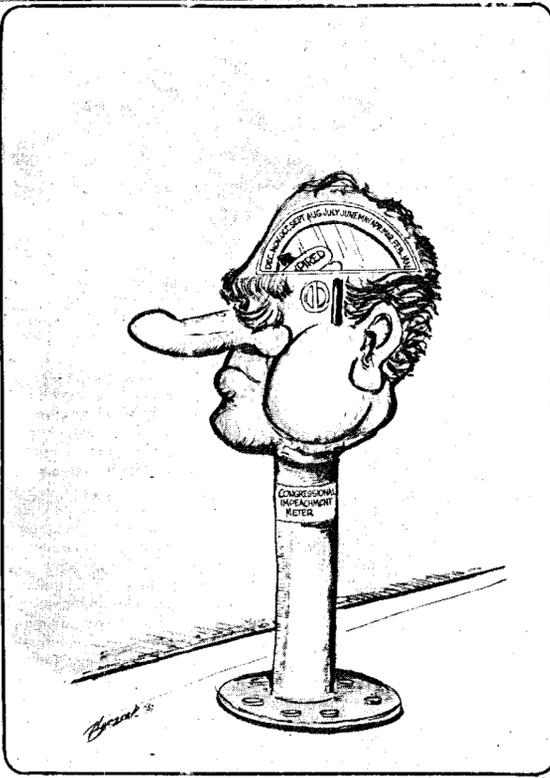

Is Mr. Nixon that important and that interesting an individual for our National Archives to want to hold and cherish "My Life and Times as Vice-president," by Richard M. Nixon?

Again, it is costing the American public their tax dollars to retain such information and house the paperwork in these massive libraries. The National Archives are for historical purposes and are in good cause—but Nixon's record should be kept filed at the local precinct, along with his finger prints and mug shots.

There is no reason, while at the present time, that the American people should have to pay Nixon's taxes or any other politicians or rich man's way to freedom. And it is now time to bring the constitutional rights of the people to the people and show them where they can get tax breaks as easy as the almighty persons in power.

It would certainly be an interesting note if all the people sent a autobiographical folder, along with pictures of the kids and Aunt Clara and Uncle Joe, and the Christmas puppies and little Dickie's first pony ride and Johnnie's first paper route to Washington D.C. this coming tax year. They may not get much of a tax break—but it might help to get congress to pull their heads out.

It's time for the American people to stop buying vacuum cleaners, encyclopedias and ballroom dance lessons from door to door salesmen. No more con-men on the streets, in the loan offices or in the White House. The Constitution is the law, rights and safety of all Americans but if it is only going to serve a select few, then it's time to change the law. There cannot be one law for the rich, a different law for the poor, another law for the black, one law for the old, one law.... But only one law, for all.

LETTERS

Males Castrated?

Editor:

As a male I have observed the Women's Liberation Movement with an open mind as possible and I have seen that the movement is trying to insure that women will no longer be second class citizens.

They have come closer to the day when women will receive the same opportunity as men in jobs, education, and equal salaries and be recognized as an integral part of society as having drives, needs and capabilities equal to those of men instead of being type-cast in the roles of wives, mistresses and child bearers.

It seems however, that there are many prominent figures in the movement who use it as a sort of bellwether to castrate the male, which I feel is the worse type of paranoia. I do not care for dehumanization in whatever form it presents itself and this is my main argument against Women's Lib. In regard to their attitude toward men, I do not want to be dehumanized. It is also my strongest feeling in sympathizing with many of their goals and one of these is contraception.

A couple of weeks ago Ms. Janis Dennis, in her column "Call Me Ms.," expressed her bitterness toward the sexist scientists for not developing a drug which could be used by men so they too may share the contraceptive burden. She stated that such a pill had been produced but that it made the man violently ill when he drank alcoholic beverages. She compared it to the side effects a woman acquires by taking the pill from gaining weight to blood clots. She ended by asking, why, in this day of medical miracles, can't someone come up with a good contraceptive for both men and women.

Ms. Dennis, if your husband will not be afflicted by the psychological fear of losing his masculinity your "burden" may soon end.

In Rio De Janerio, Brazilian scientists are testing a unisex contraceptive pill that can be taken by either partner which so far, under limited trials, has proven 100 per cent fool proof, according to its inventor Dr. Elismar Coutinho, an international figure in contraceptive research.

After prolonged use however, there was a slight change in the reproductive organs of both the female and male but returned to normal once the pill was stopped. Now if the man took the pill for 12 months and the woman took it for the next 12 months it would give both partners a change to fully recover from any undesirable side effects.

This unisex pill, which should be thoroughly studied before being released to the public market, has been tested on 30 couples and one unexpected side effect as its capability to increase the male's sexual drive.

The male pill is based on noresteroids, which impede maturation of the sperm, and on androgens which counteract the resultant loss of libido. Depending on the mixture of these elements, the pill can be designed to enhance male libido.

Coutinho said that the male pill is in an advanced stage and is more efficient than the female pill since it does not permit spermatogenesis. It takes approximately six weeks to become effective and within five weeks after he stops, the male regains his fertility.

He also admitted that his research work on the male pill was prompted by the need of a rest period for the women on the pill. I can only say suum cuique.

An Apology Due

Editor,

An apology is due Mr. Moses for some of the basic assumptions that I used in writing a letter (published Nov. 14 in Talon Marks) which attacked Mr. Moses' student rights proposals. These assumptions were drawn from a TM article in the Oct. 24 issue which has proven to be quite inadequate in conveying an accurate picture of the issues at hand.

First of all, I assumed that Mr. Moses unilaterally "cooked up" his student rights proposals without any outside consultation. He did have a precedent and example however, from a national faculty organization which advocates all seven (vice five) of Mr. Moses' original proposals. Nonetheless, this, to me, only proves that the national organization cited by Mr. Moses is incredibly naive in advocating meaningless proposals disguised as student rights. Further, it only proves that ignorance of the true issues of student rights is held nationally by faculty members. No one ever asked the so-called "oppressed" students what their views of student rights are?

A second false assumption is found in approximately 50 per cent of the satire attacking Mr. Moses proposal that: "Campus organizations should be open to all without respect to race, creed, or national origin, etc." The "etc." appeared in TM and I assumed it to be accurate reporting of his proposal. It was not! I now find that Mr. Moses' "etc." actually is a clause excluding ethnically oriented groups from the provisions of that proposal. Such a clause renders this proposal as virtually worthless because groups such as the Ku Klux Klan and the Black Panthers would both find shelter in that loophole even though both groups are based on prejudiced racial hatred. Oddly enough, Young Democrats would still be required to admit members of the John Birch Society as the proposal is written. Without dragging this issue out, the weaknesses of this proposal are self evident.

In that this particular proposal has already been defeated we need not belabor the issue.

The conclusion and most of the arguments presented by my letter are still valid in my opinion. However, my whole presentation was not based entirely on fact and thusly the letter takes on the flavor of slander. For that I sincerely apologize to Mr. Moses as I am sure he believes that he could answer all factual questions and arguments relating to his position on student rights. Most of all, I know how it feels to be slandered with unfactual allegations as such happened to me two semesters ago in the birth control controversy.

In summation, I am sorry for my erroneous assumptions, but I cannot in good conscience change my position regarding his student rights proposals.

Republicans on Way Out? Reagan May be an Answer

By CHRIS FELSHER
TM Staff Writer

It looks as if the Republicans, if there are any left, are just about on their way out of the few years of semi-control they had hoped to have expanded on.

President Nixon met with the Republican governors and apologized for any "inconveniences" he caused them with the recent scandals of his administration. Thanks a lot. Now, not only can we be sure that once again a Democrat will move into the White House, but also many state capitals will have new residents.

Then again, let's be fair. After all, our liberal friends have let the GOP into the executive mansion a whole four terms in the last 40 years.

And who could ask for more with control of both houses of Congress for two whole sessions in that same time. They know they've over-stayed their welcome and that it's time for the guests to leave.

For the last 20 years, the most hopeful Republican was Richard Nixon. Through eight successful, but somewhat controversial, years as vice-president, it looked as though he would continue in the number one spot after Ike left.

When the star from the east rose in 1960, he became politically paralyzed for eight more years. His comeback was the answer that the conservatives had hoped for.

By now, even his strongest supporters aren't satisfied with his performance. Who can they turn to now? Agnew's out, Gerald Ford, even if he wanted the job, is yet to prove how capable he is.

There's got to be somebody to represent the GOP in '76 to show that the Republicans are alive but not-so-well in America.

Luckily, they have three more years to turn the tide. By that time Ronald Reagan — wait, don't laugh — will be out of Sacramento, no, not to make movies again!

The thing is, if anyone has more obstacles to overcome, it's probably our own "favorite son." Can he ever overcome the movie star image?

He did it twice on a smaller scale, why not shoot for the big time? The difference was that he was fighting against something (remember Pat Brown?) instead of for the leadership of his party.

He must also overcome the reluctance of voters to support him as a rich man unwilling to play the humble pie role.

Instead of being put down because he doesn't feel the rich should have to be penalized in the form of taxes just because they're rich, he should be recognized as a political realist.

He knows that you can't please all of the people all of the time, but by not complaining, you might find yourself as someone who is sometimes pleased.

Policeman's Judgement Is Not Questionable

By DONALD GLASSCO
TM Staff Writer

One can hardly realize the importance of police in our legal process. The police play the role of the man in the middle, and for many people they are the only source of contact with our legal system. But the nature of the policeman's job allows him to exercise discretion which is not subject to check and balance or even questioned by higher authorities.

Police procedure is different from state to state so what the policeman does is often perceived as what the law is and this is so true in many cases, because when the police break the law there is no law.

The main area of conflict begins with the policeman's perception of his job and how it differs from that of the expectations of the community. For example, the policeman views himself as an expert should be punished, he often takes the law into his own interpretation and resents the procedural due process

that he represents. When a policeman makes an arrest he is determined that the suspect is guilty and it would appear irrational to him to place the subject in a position of innocence until proven guilty.

In the past, many confrontations between students and the police have resulted as a result of the police policy of equating what they do in normal procedure as what is actually law. This type of practice is employed to punish suspects who are seemingly guilty yet unlikely to be convicted and to secure respect in the community where patrolmen lack respect.

The police justify this method on the grounds that any suspect who arouses their suspicion or doesn't delegate due respect to that position, loses his claim to the privileges, which are actually rights of all citizens. It has been my experience that policemen focus more on order than on legality and often develop a special concept of illegality for his own purpose.

It's Time for a Change From The Football Blahs

By CHUCK EASTERLY
TM Staff Writer

In a few weeks, only division championships will be playing football in the National Football League and it is becoming increasingly clear, at least to this football fan, that some changes are necessary if the sport is to stay on the "sport" list.

Week-end television screens are blasted with football every week with college football on Saturdays and pro football on Sundays and Mondays.

Amazingly, the college games are almost always more exciting than the pro games. While colleges utilize the quarterback as a pass-run threat, the pro continue to use the quarterback for passing purposes only, thus giving the defense added strength. (Remember, if the defense is sure the quarterback isn't going to do something other than hand off or pass the ball, they can concentrate more on stopping the other players.)

Giving the quarterback the option of running, handing-off, pitching-out or passing (like most colleges and high schools have done) puts added pressure on the defense.

But the pros don't want to risk the safety of their quarterback, so there we sit on Sunday afternoons watching 45 plays go up the middle.

Another place the colleges have an advantage over the pros (as far as

excitement goes) is the position of the goalposts.

In colleges, the goalposts are set back at the end of the end zone, where they belong. Having them ten yards further back makes it just that much more difficult to score a field goal, thus increasing the excitement of the play.

Extra point attempts are also harder to make in the colleges than they are in the pros. Many college and high school games are won on point after touchdown (PATs), but it's hard to think of the last time a professional kicker missed his seven-yarder.

On the subject of PATs, why aren't the pros allowing the two-point conversion? In college and high school, a team can elect to go for two points after a touchdown by running or passing the ball into the end zone from three-yards out. This way, if a team has just scored to make the score 21-20, they can go for two points and win the game instead of choosing the boring route (a kick to tie the score.)

Many other details will have to be worked out in the coming years if the National Football League hopes to continue. There are very few people who enjoy watching a kicking contest, and I expect that Pete Rozelle and company will wise up before long.

But until that time, it is the viewer (and the players in many instances) who are going to suffer.

The Only Place

EDITOR,

Bob Ramirez asks "Where is truth?" The answer is so simple it was obviously overlooked. Famine, war, violence and dishonesty, seems to me I've heard those words before. Where? The Bible? Ah, yes.

Over two thousand years ago when the world was a much more beautiful place, Timothy in his second letter in chapter three told about what men would be like in the last days before the return of Christ. It sort of sounds like society read

all of those verses and tried to live up to it's expected evilness.

To answer Mr. Ramirez's second question, "Where do we go from here?" there is only one place to turn in this violence filled world. You can only turn to God; whom we reach through Jesus, the one that communicates with us through the Bible.

Lots of people are gonna have to wake up real soon or they are gonna get the shocks of their lives.

Pile of Trash Raises Money

Money and hassle seem to be words that coincide when it comes to a college student's desire to attend college. As inconspicuous as \$50 may be to a tycoon, it could be life or death when it comes to a student's need of money.

There are money making events approximately once a month, according to Keith Adams, financial assistant coordinator of the school.

Money at this time has been contributed by the various student clubs in Cerritos. The project, G.A.P. (glass, aluminum, paper), which has been organized for the "breadhunt" loans and grants, which go to students in need of the money is one of these money making events.

Clubs Sweeping Tournament

The Vets Club and Phi Beta Lambda at this time seem to be sweeping the G.A.P. tournament. At last formal count, the Vet Club has over 2,298 lbs of glass, 3,370 cans of aluminum, and 1,914 inches of paper.

Lambda at this time seem to be sweeping the G.A.P. tournament. At last formal count, the Vet Club has over 2,298 lbs of glass, 3,370 cans of aluminum, and 1,914 inches of paper.

Phi Beta Lambda is running second, with a rumor of "last minute" handling of glass, aluminum and paper according to officials involved in the contest.

Awards for the event are trophies,

which will be given out for hosting, service points, and possibly an award for two or three categories.

The G.A.P. effort drive went on last year as well as this year. "The whole thing is picking up. We are getting more improvement this fall than we had last spring," according to George Welsh, member of the Vets Club.

The whole effort will help the people who are in need of money which comes out of G.A.P. and other subjects which pertain to financial aids.

More of an incentive to continue through college. "is one of the comments in a letter to Keith Adams after financial assistance help was given in continuing education for one student after a monetary problem.

Delighted & Grateful

"I am both delighted and grateful that when my need arose, a hand was extended to me with help and understanding," was another comment in a letter to Adams.

The money from drives, including G.A.P., all go into financial aids.

At Cerritos there are six members on a scholarship committee, according to Adams. Two people from financial assistance, two students, and two faculty members are involved.

At this time there is \$1,000 in this financial aid. It's handy for people who need it," commented Adams.

ACTION AFFAIRS

By DEBBIE BOLTON
TM Activities Reporter

Brief Announcements

The Circle K Christmas tree sale is still on in the C-2 parking lot, in front of the tennis courts on campus. The sale will last until Christmas eve or until the supply runs out. Students can receive a \$1.00 discount on trees 5 feet or over with their brown ID card. The money collected is used to fund our campus and community projects for the coming semester.

CONGRATULATIONS — The United Crusades Drive collected \$625 from the student body this year compared to last year's \$72. Philia, a girl's sorority, collected approximately \$164. In doing so Philia won a plaque and \$25 from the ICC. Cerritos met their goal of \$3,000 and want to thank all clubs for their participation.

This Week

TONIGHT — A banquet in honor of Cerritos football team, at the Royal Inn in Anaheim will be at 7 p.m. Guest speaker for the event will be Pepper Rogers.

THURSDAY, DEC. 13 there will be a noon concert in the student center at 11 a.m. featuring the Bluegrass Band "Hobo Grin"

The Society for the Advancement of Management will present a film "Management and Cost Accounting" in LC-4 at 6:30 p.m.

FRIDAY DEC. 14 the cosmetology department will have a Christmas party at 1 p.m. to 4 p.m. and 7 to 10 p.m.

SATURDAY, DEC. 15 LDS is having a Christmas party for under-privileged children in the student center around 7 p.m.

Next Week

DECEMBER 18 there will be an ICC meeting at 11 a.m. in AC-33.

DECEMBER 19-JANUARY 1 — Christmas Vacation.

Following Week

JANUARY 8 the film "Kotch" will be shown in BC 17 at 7:30 p.m., sponsored by ASCC. Admission is free with brown ID card.

Have a Merry Christmas!

Disabled To Register Early

All disabled students will be able to register early for the spring semester 1974 on Friday, Jan. 11 in BC-31, from 10 a.m. to 12 noon.

"The purpose of the early registration is to help the disabled student get the classes he or she wants ahead of the rush and beat the rush at registration," said the student must have a pre-plan card and to save time the student is asked to pick up a registration packet either in

the orthopedically handicapped department, BC-44, or the admissions office and have it filled out. Wally Frost counselor, three peer-counselors, and the admissions staff will be on hand to give help where needed.

"This is but one service offered the disabled student on the Cerritos campus. All disabled students are urged to get involved in the handicapped program," said Hughlett.

Walter Jones' Painting

Jesus Christ — As Saint John Wrote And Thought Of Him

When an artist agrees to do a five feet by ten feet painting of Jesus Christ does he just sit down in front of the huge canvas and start painting?

"Definitely not," said Walter L. Jones, associate professor of art, Cerritos College. Jones recently completed and donated such a painting to Saint John's Lutheran Church, 18422 Bloomfield Avenue, Cerritos.

What is the difference between this painting and some of his other paintings? Jones was asked. "Commitment is the key word," Jones said. "I guess you could say it is the difference between a little essay and a well written novel."

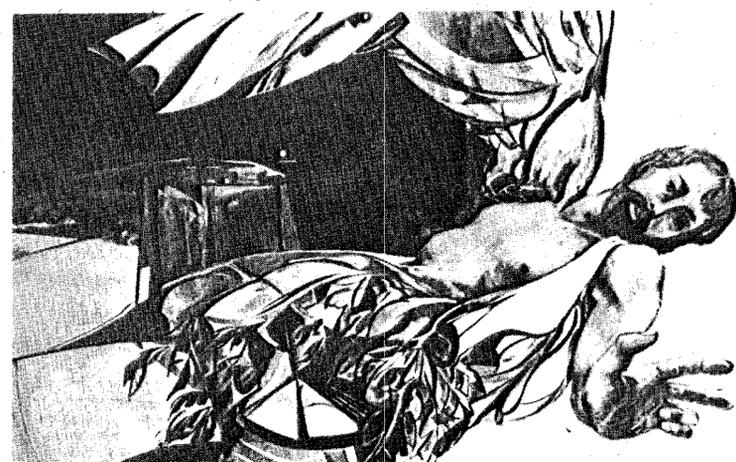

Approximately nine months elapsed between preliminary discussion and final completion of the painting.

Preliminary discussion with Ted Youngerman, pastor of St. John's, disclosed that the painting would be installed in the narthex of the church. The choice of subject was Christ as St. John wrote and thought of Him.

During the early discussions Jones said he began to hear again and again key phrases or words — the Eagle of God, vital, transcendental, the Good Shepherd, Jones questioned himself.

Could he, "relate the progression of thought, words and concepts interchanged, the tentative shaping of

images, the literal and poetic metamorphosing into the visual and lyric, and finally, the fusing of all this into a total communication that is then termed "art?" Jones was attempting a

"CHRIST-GOSPEL OF JOHN" Painting by Walter L. Jones Bloomfield Ave., Cerritos, Calif. is on display at St. John's Lutheran Church, 18422 So.

Unimaginable High

Sky Diving Produces 'Rush'

By WALTER GRAY
Senior Staff Writer

"If you haven't traveled at a speed of 174 feet per second, then you don't know what a real rush is." This and other comments were made by Kenneth Beal of Cerritos' Sky Diving Club at Lake Elsinor right before he made his last jump of the day.

Beal, an avid sportster of sky diving, snow skiing, flying and just about anything else that takes a risk of human life, will be the first to testify that there is nothing to take the place of good excitement for individual sports. And sky diving is no exception.

"When you're falling for thirty seconds, you cover over 4,600 feet. There is a point midway that seems to make the earth, time and all related happenings stand still," said Beal. "Actually, the feeling is indescribable, unreal, even unimaginable."

It Takes Time

Beal has been jumping for a little over four months now and is going for his Class A "Student" license. The license takes 30 jumps and to date Beal has 21 jumps to his credit. A broken ankle last October put him out of commission for a while, but eight weeks later he was right back jumping again.

"The more jumps you make, the more qualified you become," he said. "But it takes time, the equipment costs a lot of money and there has to be good weather. No rain, no fog (low clouds) and no excessive winds. To be qualified as an expert you have to make 205 jumps. These are all free fall and they are from 3,000 to 22,000 feet in nearly two minutes in a weightless condition, just exhilarating," he said.

How to get Started

Initial training for sky diving actually starts when persons on campus sign up for the club. Here they are given introduction lessons, films and club tours at Lake Elsinor.

For those beginners, the school organization can get discount prices at Elsinor for their parachutist school and if you're in by 9, you're out by 2. That's right. You make your first jump the same day, weather permitting.

"You are trained in the classroom and in the field," said Beal. "You work with

mockups of an airplane and make jumps off of a platform to simulate landing conditions. The instructors are all expert jumpers and jumpmasters, the pilots are all licensed through the Federal Aviation Association (FAA) and are extremely interested in your well being," he said.

"But the ride down is much better than the ride up," Beal said. The planes, as he pointed to a row of World War II relics, are safe but scary. "One of them usually loses a landing gear from time to time so it's better to be a jumper than a passenger," he joked. Who's joking?

One-Third Female

At the present time the number of female members of the sky diving club on campus is very slight. They are

usually the girl-friends of the guys that do the jumping.

At Lake Elsinor the average of one jumper out of three is female.

"Surprisingly, they are the first ones to jump after completing the school and the first to reach the higher elevations for free fall," Beal said. "And I admire their courage."

There are no particular groups or types of persons that sky dive, according to Beal. They are teachers, doctors, students, nurses, accountants, sales persons—even the guide on the Jungle Cruise at Disneyland is a weekly sky diver.

"Strangers, all, until you meet 10,000 feet above the ground in mid-air. You join hands and form a 'star' and you feel

like you've known one another for years," Beal said.

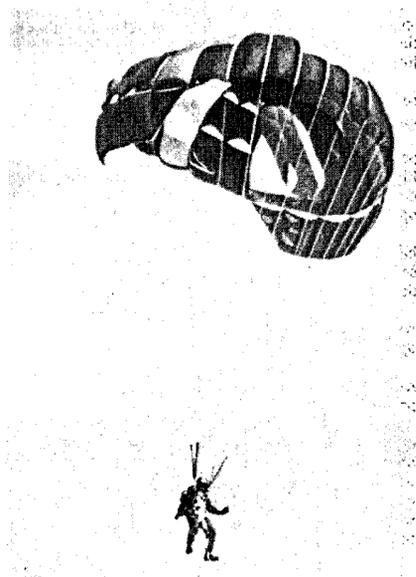

"Then you break away, fall for a few more seconds alone, pull your rip-cord, listen to the sound of your chute as it pops open in wind and then you kick back and ride the ribbons down to good ole mother earth."

The first few landings are a little clumsy, Beal stated. But after about three of them it can all be figured out. A thrilling, exciting event for Beal and when asked when he was going again, he replied, "Maybe next week."

"I don't know, it might interfere with my flying lessons or crowd my time for snow skiing on the week end." What's next? I asked. "I don't know that either," he replied. "I've already tried speed boats and motorcycle racing, maybe soaring."

FREE FALL FREAK Kenneth Beal of Cerritos' Sky Diving Club falls over Lake Elsinor from an altitude of 7500 feet for a 30 second delay.

THE REASSURANCE of a "popped" chute allows the jumper to kick back and enjoy the ride down, winds and weather permitting. (TM Photos by Walter Gray)

Oral Interperation Theater Features 'Moon Marigolds'

"Harold and Maude" and "The Effect of Gamma Rays on Man-in-the-Moon Marigolds" was presented last night at 7:30 in BC-17. Jim Dighera's oral interpretation class read the scripts from both plays.

"Harold and Maude" is the story of Harold, who is in love with death, and Maude, who is in love with life, and how the two of them get along together.

"The Effect of Gamma Rays on Man-in-the-Moon Marigolds" is the story of a mad mother and her two tormented daughters and how the daughters turn to other things for the attention they need.

The Reader's Theater uses students who are involved in the speech department to read scripts of different plays before audiences. They don't use any props in this type of production and they don't use a special type of stage.

They just sit up in front of the audience and read their part.

Before the production began, Michael Jones and Micky Brussur read "This Property is Condemned" by Tennessee Williams.

"Harold and Maude" was read by Randy Jurado, Howard Pruty, Don Lowell, Bill Kline, Kathy Kerns, Shirley Stellingworth, Carol Shutt, and Vicky Jurovick.

The readers for "Marigolds" were Vicky Jurovick, Lori Gilliam and Gregg Leach.

The Reader's Theater was student directed by Gregg Leach, under the direction of Jim Dighera. This production has been entered in the collegiate festival that will be held on this campus later in the spring. Campuses from throughout the state will submit other Reader's Theaters to be judged.

NEWS BRIEFS

CALIFORNIA STATE UNIVERSITY AT LONG BEACH will have Andrew Heck, school relations officer, on campus from 9 a.m. until noon Thursday, Dec. 13. He will discuss what Cal State Long Beach has to offer Cerritos students. Interested students can contact the reception desk of the counseling office for an appointment.

"LAS POSADAS" a ballet folklore of Cerritos students will be presented on Friday Dec. 14 at 8 p.m. in Burnight Center to help celebrate Christmas. Everyone is invited to attend free of charge.

JOB PLACEMENT OFFICE will now be open during the noon hour on Monday, Wednesdays, and Fridays only to help those students that are free at that time. Students that are interested in a job may sign up now for appointments.

CERRITOS' LIBRARY will be open during the Christmas holidays, from 8 a.m. to 4:30 p.m. from Dec 19 through Dec 24. Dec 24 and 25 the library will be closed and on Jan 2, the normal library hours will resume.

"A FAR COUNTRY" will be shown until Dec. 15 in BC-31. Admission is 50 cents with ASCC card and \$1.50 for general admission.

THE CERRITOS COLLEGE MUSIC DEPARTMENT will host a Christmas symphony at 8 p.m. tomorrow Dec. 13, in student center.

CLOTHING BLANKET DRIVE — The Prosthetics and Orthotics club will be sponsoring a blanket drive until Dec. 15. The clothing bin will be in front of BC-44, the clothing will then be taken to the Valley Orthopedic Clinic for needed repairs.

CHRISTMAS HOLIDAYS will be from Dec. 19 until Jan. 2. There will be no classes within this time.

TALON MARKS will not come out again until Jan. 16 due to the holidays.

Fall Awards Given to Top Leaders For Outstanding Service to Cerritos

The banquet for fall service and leadership awards will be held Jan. 11. Students will be selected from the list of persons nominated by students or faculty members.

The awards to be presented will be the Gold Falcon, Silver Falcon, Bronze Falcon and the Service Certificates. Students will be chosen by an Awards Committee, consisting of Cerritos students. The Awards Committee sets up the banquet and distributes the awards, and determines what award is to be received by each student on the basis of a point system.

To be eligible for these awards the following is needed: for a Gold Falcon: Sophomore outstanding in two or more activities. They must show leadership, service, participation, scholarship (2.0 grade point average) and personal integrity.

A Silver Falcon has exactly the same requirements, except it will be awarded to ten freshmen and ten freshmen

women instead. The Bronze Falcon will be awarded to anyone with excellence in two or more activities.

The Silver Certificate goes to anyone in recognition of exceptional service and participation in a given program sponsored by the Associated Students.

Projects like the United Crusades Drive and the G.A.P. competition day are two of many extra-curricular activities a student may be nominated and awarded for, according to Richard Powell, Commissioner of ICC (Inter Club Council).

The Awards Committee will meet again on Dec. 17 to go over the nominations and begin selecting the students that will receive the awards. Nomination sheets had to be in by Dec. 10, and the sheets from students who have been nominated by other persons are due Dec. 12.

Tickets go on sale Jan. 2 for the banquet at the Cerritos Box office.

Falcons Defeat Three Top Southland Teams

By DEAN DIRKSEN
TM Staff Writer

The class of the Cerritos basketball team is beginning to show. A sign of class is when a team wins close games against quality opposition. Last weeks games could not have been any closer and the opposition any better.

The Falcons won three games by a total of six points. Cerritos defeated Rio Hondo 64-62. Long Beach 80-77 and Harbor 67-66. Prior to the defeats by Cerritos the three teams had a combined record of 14 wins and two losses.

The Falcon basketballers hope to increase the record to eight wins against one loss when they encounter the Alumni team Friday.

This group of alumni is not the grey haired, middle-aged bulge set usually associated with alumni games. Tentatively slated to participate is Ev Fopma, 1970-71 Player of the Year.

teammates Paul Ellis and Jerry Writer. Dave Hill, last year's second team all-conference selection. Mike Moniz is expected to play as well as Tony Rodriguez, a member of Cerritos' State Champion team. Cerritos all time career assist leader, Randy Craig, will be in the lineup.

FALCONS 64 RIO HONDO 62

In a game that matched All-Star centers, Cerritos' Al Fruhwirth and Rio Hondo's Fred Haberecht, Cerritos came out on top. Fruhwirth scored 25 points and Falcon forward, Ed Carsey held Haberecht to 15 points while contributing 12 to the Cerritos total. Second leading scorer was Randy Small with 16 points.

With eight minutes left to play in the game, Rio Hondo squeezed ahead by one point 54-53. Then the heist started. The Falcons stole the ball three times to take a three point lead 59-56 with less than two minutes to play. Rio Hondo could

gain only one point on the Falcons and the game finished with the Falcons winning by two 64-62.

FALCONS 80 LONG BEACH 77

Free throws sometimes lose their significance in a game because the action is stopped when they are shot and they only count one point each. In this game with the Long Beach Vikings they played a very important part. Cerritos added 20 points to its total output via the free throw route, while the Vikes added only 11 to theirs.

Two dramatic free throws were popped in by Tony Hernandez. Cerritos had a one point lead 78-77 with nine seconds left. Long Beach had possession of the ball and hoped for a last second shot and victory. Long Beach's Everett Ratleff (brother of former All-America Ed Ratleff) shot a fifteen foot shot that hit the front of the rim and rebounded back to Falcon Tony Hernandez, with five seconds remaining. Ratleff fouled Hernandez. With the one and one in effect (a foul situation where you get a second reward shot if you make the first) Hernandez calmly dropped in two free throws to insure the Falcon 80-77 victory. Coincidentally the Falcons last eight points were made at the free throw line.

Falcon forward, Randy Small, lead all scorers with 26 points. Al Fruhwirth followed closely with 22 points and Ed Carsey's 13 points rounded out the double figure scorers.

The Falcons victory over the Vikings was the first since the 1968 season. In the 28 meetings between the two schools the Vikings hold a 15-13 series edge over Cerritos.

CERRITOS 67 L.A. HARBOR 66

The Falcons played catch up all night, but catch up they did. It took an overtime period for the Falcons to subdue a previously undefeated L.A. Harbor team 67-66.

Harbor stayed in front most of the first half, which ended with Harbor leading 26-20. It was seventeen minutes into the second half with about two and half minutes remaining to play when the Falcons tied the score 57-57. Each team scored two points each and the regulation play ended at 59-59.

During the overtime session Harbor came up with a three point play to forge a three point lead and it looked like the lights were about to go out for the Falcons, but the Falcons fought back within one point. With seven seconds left in the overtime and the Falcons trailing by one; Tim Fruhwirth made a basket to give the Falcons a 67-66 lead and victory.

Tim's brother, Al Fruhwirth, lead all scorers with 18. Randy Small scored 12. Phil Weinberg and Ed Carsey had 10 each, followed by Tony Hernandez with eight, Tim Fruhwirth seven, and John Rowenhorst with two.

Falcons Place Fifth In Meet

Last Friday some of the top archery names in the country got together for a shootout. The event was the 11th annual Southern California Collegiate Archery Championships. The site was El Dorado Park in Long Beach and the weather was perfect.

Eleven schools were entered in the competition. Heading the list of schools was Cal State Long Beach, Los Angeles State College and Cal State Fullerton. Other entries were Cerritos, Citrus, Cypress, Mt. Sac, Palomar, Rio Hondo, Riverside, and San Fernando Valley.

Cerritos was the co-host for the championships - Cerritos Physical Education Division Chairman Joan Schultz heads up the archery program at Cerritos.

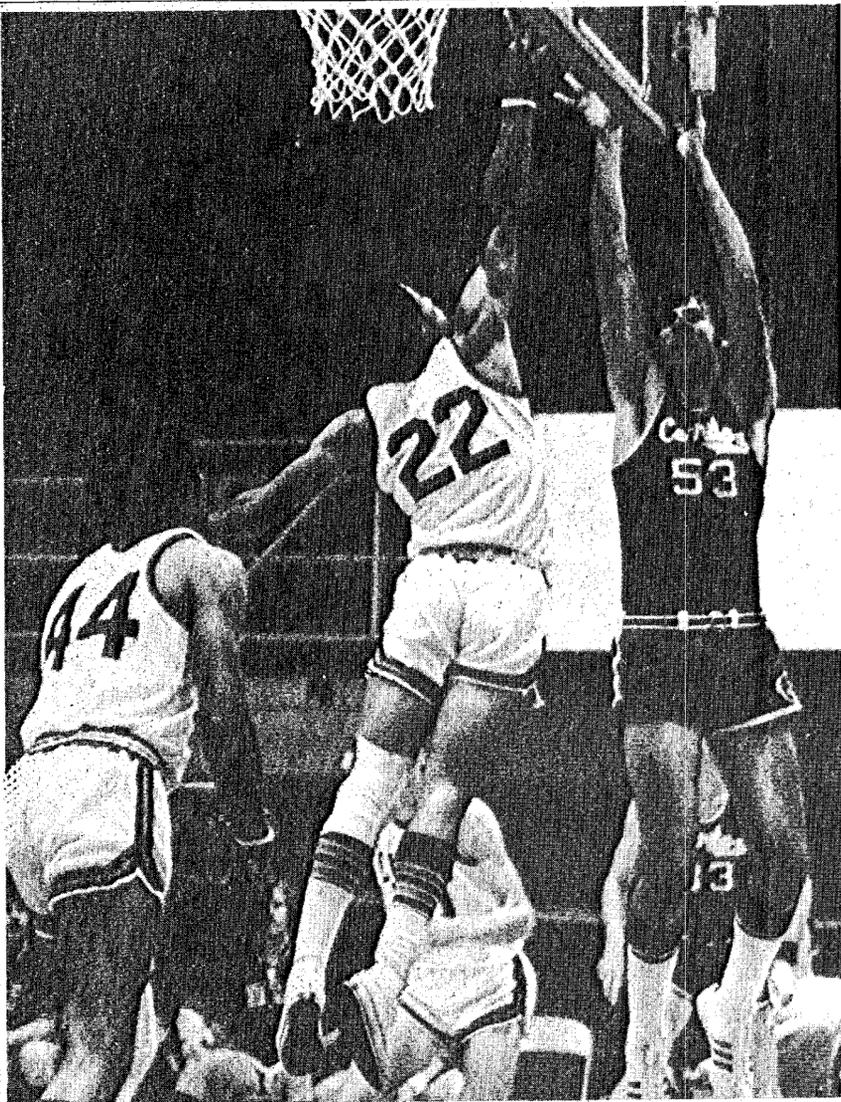

Cerritos entered nine archers in Friday's competition. The members of this year's team are Cheryl Ahaney, Margaret Belcher, Cheryl Culhane, Mike Culhane, Ana Guegby, Jay Johnson, Joe Lopez, Larry Nauman, and T.J. Mcmanus.

The next meet for the team will be on Friday, January 11th, at Downey Archery Lanes. Citrus and Rio Hondo will be the co-hosts for this meet.

Last Friday the Cerritos archers took sixth as a team. San Bernardino Valley won both the Men's title and the Co-Ed title. Cal State Long Beach won the women's title.

Individual winners in the meet came up with very strong scores. In the men's division Don Rubska of San Bernardino Valley paced the field with a score of 1379.

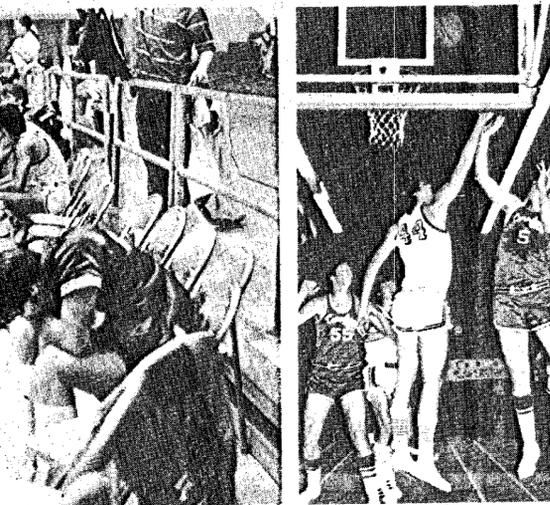

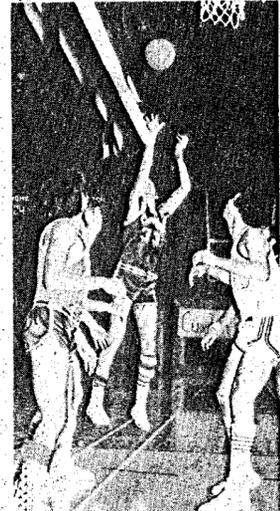

In the women's division Jan Smith of Cal State Long Beach captured the title with a score of 1333. The highest possible score in a meet is 2,000.

THE WINNING WAY— The play of Al Fruhwirth (53), Randy Small (33), Ed Carsey (5), Phil Weinberg (35), Tim Fruhwirth (22), along with reserves Mike Pilling, Steve Wilson, and Tony Hernandez have led the Falcons to one of their fastest starts ever.

The Falcons, with a record of 7-1, enjoyed a highly successful season last week as they trimmed arch-rival Long Beach City College, LA Harbor, and Rio Hondo by a total of just six points.

The Falcons will host the Alumni this week and then will journey to the Modesto Tournament on Dec. 19, 20, 21. They then will travel to the Santa Monica Tournament on Dec. 26, 27, 28. (TM Photos by Dirksen, Ott, Palacios)

SPORTS

Levy Replaces Rodgers; Poloists, Runners Honored

The swimmers and runners received the awards and swimming coach Pat Tyne received the embarrassment at the 13th annual Water Polo and Cross Country Banquet.

Coach Tyne introduced the wrong man as recipient of the water polo, most valuable player award. By vote of his teammates goalie Phillip Dodd was awarded MVP; however, Coach Tyne announced the winner as Dennis Morates. It was an honest mistake because Dennis missed by one vote. Paul Olson was selected by his teammates as Captain. Tyne announced this award correctly.

Life-time passes and belt buckles were received by sophomores Jeffrey Blair, Brian Harvey, Glen Myer, Paul Olson and Andrew Pettis. The passes and buckles were awarded for two years of competition.

Cross country coach, Dave Kamanski, did not get mixed up and made his presentations to the right men. Carlos Ponce received the captain award and Jeff English was selected the MVP of the cross country team. Robert Jordan was the only member to receive a buckle and life-time pass.

Guest speaker at the banquet was Mr. Ken Lindgren, Head Water Polo Coach, California State University at Fullerton.

Dave Levy, John McKay's No. 1 assistant at USC for 14 years, will be the new guest speaker at the annual Cerritos football banquet.

Levy is replacing former UCLA coach Pepper Rodgers who recently announced his resignation at UCLA to take on the coaching reins at Georgia Tech.

Levy, a graduate of UCLA, is one of the names which have been popping up as a possible successor to Rodgers.

The Banquet will be held at the Royal Inn in Anaheim tonight. Tickets are seven dollars and are on sale in the student ticket office.

Los Angeles City College and Fresno City College battled to a 10-10 tie in the state's junior college championship game.

Fresno's Jeff Klein kicked a 27-yard field goal with no time remaining after LACC took a 10-0 lead in the first half.

LACC defeated South Coast Conference Champion Fullerton the previous week to gain a berth in the finals.

Cerritos Successful With Frosh Squad

By CHUCK EASTERLY
TM Staff Writer

Hal Simonek's Falcon wrestling team lost a close match to Bakersfield College but won three other matches last week to give the majority-freshman team a 3-1 record thus far in the season.

"We fell apart," Simonek said about the Bakersfield match, but he still seemed confident about the strength of his team.

"They love to work. They're out running and practicing seven days a week preparing for each match," Simonek said.

Earlier in the week, the Falcons recorded two victories in a dual meet against San Diego Southwestern and Grossmont Colleges.

The Falcons whipped San Diego 33-10 and then came right back and clobbered Grossmont 38-6.

Don Wakefield and Mike Salcido were the two premiere wrestlers in both of those matches as they have been in most other matches this season.

Cerritos played another dual meet last Saturday against Pierce and Bakersfield Colleges.

The Falcons, who only have two sophomores on the team, soundly defeated Pierce 42-6 and then lost their first match of the year to the Renegades of Bakersfield 32-9.

Even though the score sounds lopsided, Simonek is quick to point out that

"the match was very close... very tight, with five one-pointers deciding the winner."

Five of Simonek's players lost matches by one point in the Bakersfield contest. Had those five matches gone the other way, it would have been another Falcon victory.

Once again, Wakefield and Salcido performed well for the Falcons winning both of their matches.

After six matches and one tournament in this season, Simonek feels that "this is a much better group of wrestlers than last year."

Last year's wrestling team tied for the South Coast Conference Championship and finished fourth in the state.

Simonek wasn't bitter about the loss to Bakersfield.

"It was just one of those things; a good sophomore team against a good freshman team and the sophomores won."

Cerritos will not meet Bakersfield again this season, but Simonek feels that his team is improving so much each week that Bakersfield wouldn't be able to beat the Falcons a month from now.

This Saturday, the three best teams in Northern California will meet the three best teams from Southern California in a tri-match at Bakersfield College.

Cerritos, Pierce and Bakersfield will represent the southern half of the state and will compete against Chabot, Fresno and Modesto.
